Cloud Services for Business

Cloud Services for Business

- eFax®
- eVoice®
- FuseMail®
- Campaigner®
- KeepItSafe®
- Onebox®
- www.j2.com

Outline:

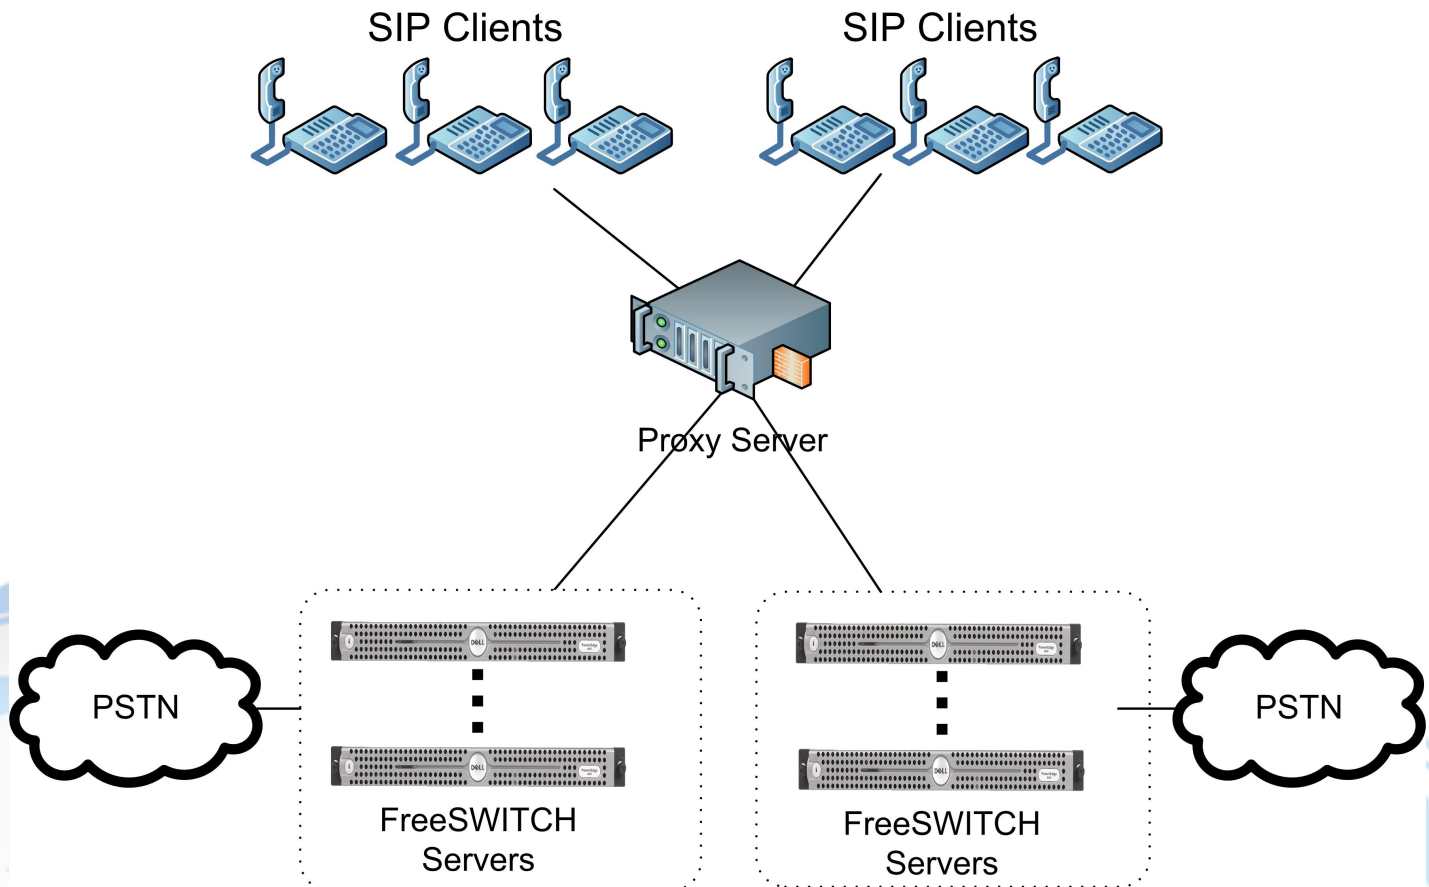

- Trivia Questions
- OpenSIPS
- Cloud
- Redundancy and High Availability
- Question?

Trivia Question

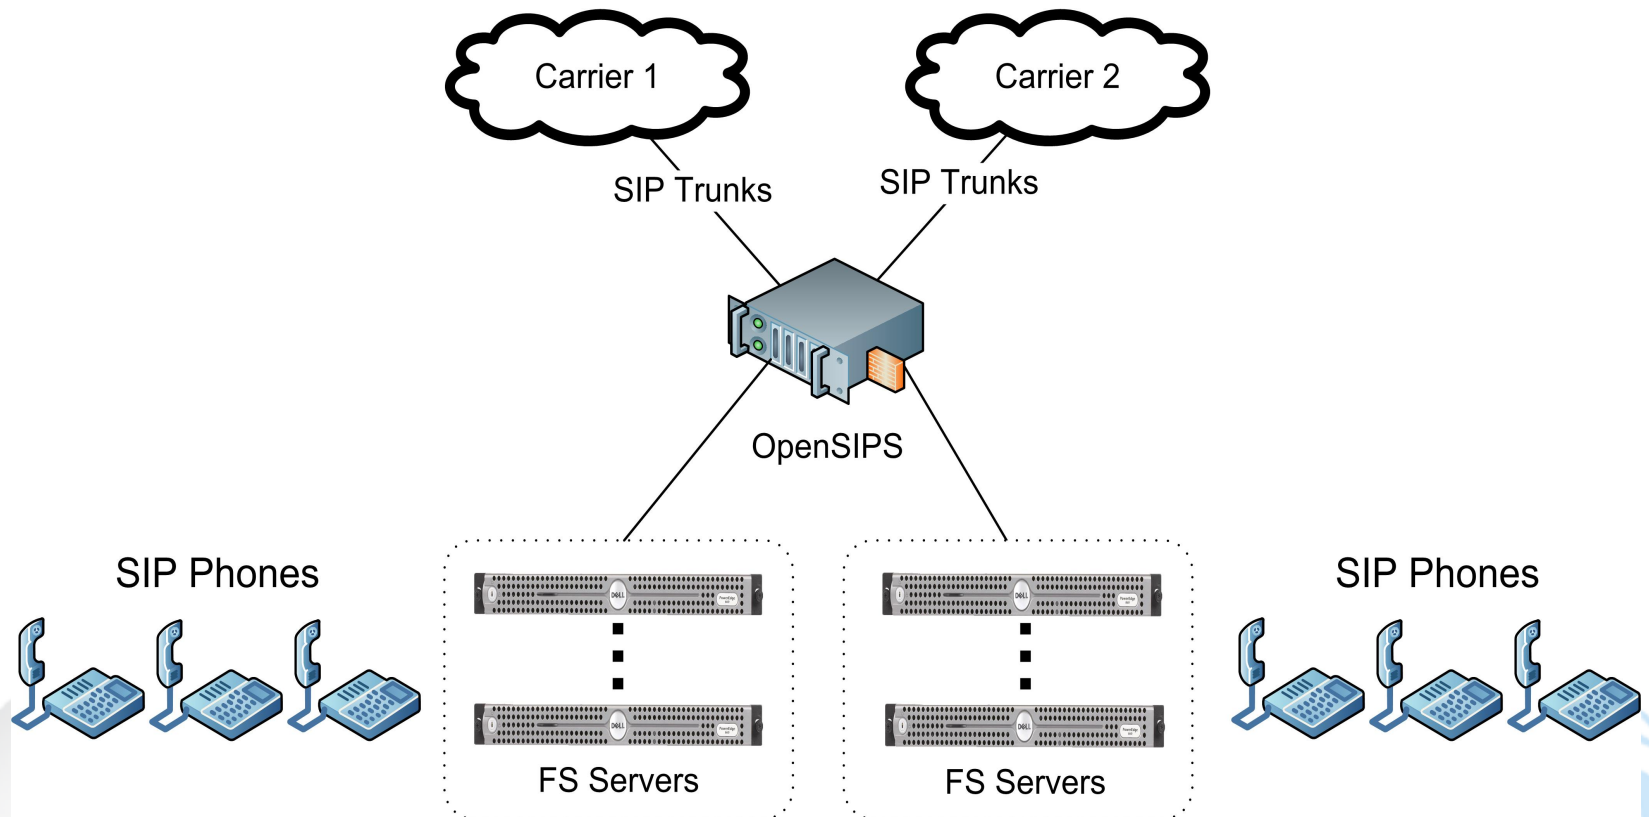

Incoming calls from SIP Phones should be routed to a different Freeswitch server based on the destination number, e.g. 4xxx goes to FS1, 5xxx goes to FS2 and so on. What's the best way to do this?

Trivia Question 2

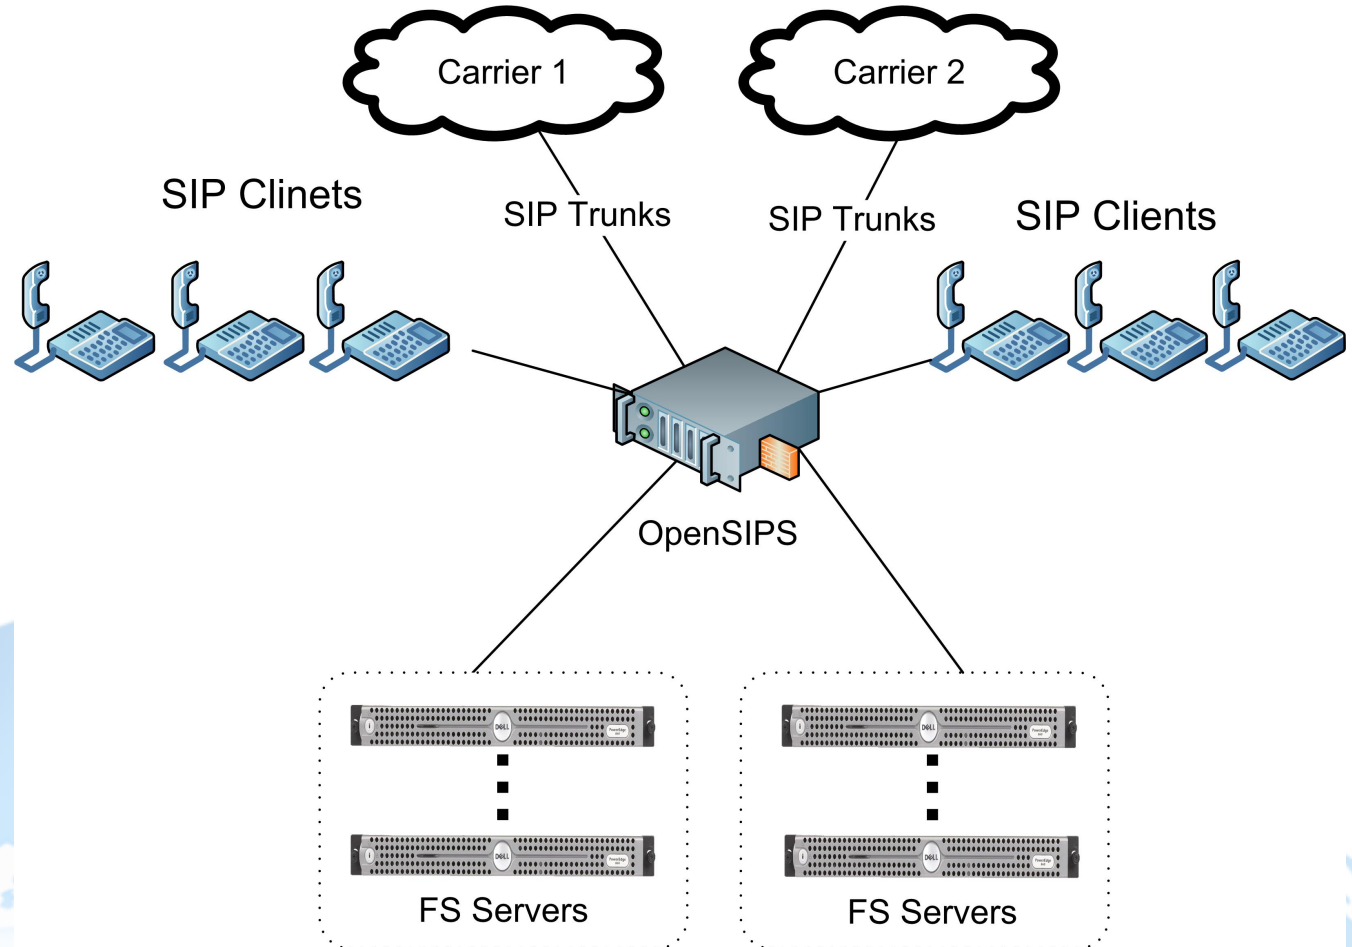

Calls From Carriers Need to reach a different set of SIP Phones based on the destination dialed.

Trivia Question 3

Same Rules on both directions?

- History

The middle man

- IP: Firewalls, Routers, NATs
- ISDN Gateways: Digital and Analog
- Electricity: Distribution Panels
- Water Supply Distribution System
- Airport transits

- When it comes to VoIP, you need OpenSIPS

Advantages of using a proxy server

- Improved performance
- Security and Authentication
- Flexibility and Customization
- NAT
- Redundancy and High Availability (failure detection and re-routing)
- Distribution
- Routing, Rules and Priorities

Advantages of using a proxy server (Cont'd)

- Load balancing
- SIP Signaling, Codec and Digit Manipulation
- Scripting
- Resource Allocation
- Rate Limiting
- Media Proxy (or Direct Media Path)

Open Source

- No Cost, no licensing fees
- Flexibility, Customization and Integration
- More independence (not depending on a single company)
- Community
 - Wider support
 - Continued enhancements
 - Tools
- In line with future of telecom

OpenSIPS Overview

- Call Routing (Rules, Priorities, LCR & Reporting)
- NAT Traversal
- Security
- Registrar Server
- SIP Signaling, Codec and Digit Manipulation
- Load Balancing
- Failure detection and re-routing
- Scripting
- Database
- Management Interface

OpenSIPS Overview

- Performance – Over 1000 calls per second
- Distributed architecture
- Over 130 Modules
- www.opensips.org
- Learning Curve
- Mailing Lists, Forums, OpenSIPS Summits, etc.

Modules (over 120 modules)

- SIP Clients related modules:
 - Registrar Server
 - Authentication
 - Presence Server
 - Instant messaging, Jabber, Jsn, SMS
 - NAT Traversal
 - Back to Back User Agent (topology hiding)
 - Database (mysql, oracle, odbc, postgres)

Modules

- Trunks and Routing
 - Dynamic Routing (Prefix base rules, priority, time, distribution, drain mode, failure detection and re-routing)
 - Load Balancer (Dispatcher)
 - Dial Plan
 - SIP MSG OPS
 - NAT Traversal
 - TLS
 - XMPP (SIP to XMPP Gateway)

Modules

- Utilities
 - Rate Limit
 - Statistics
 - SNMP interface
 - SIP Trace
 - SIP Capture
 - Pike – Flood detector
 - Perl
 - Accounting
 - Call Control (PrePaid application module)

Cloud

What is Cloud?

- Carries Rain and Thunderstorms

- Sometime there is snow

- Somewhere – Courtesy to IP (Internet Protocol)
 - Multiple geographically different locations
- Safe('r)
 - Emergency Power
 - Monitored
 - More Expensive and Redundant Cooling Systems
 - Secured
 - There is Higher Availability
 - Redundancy

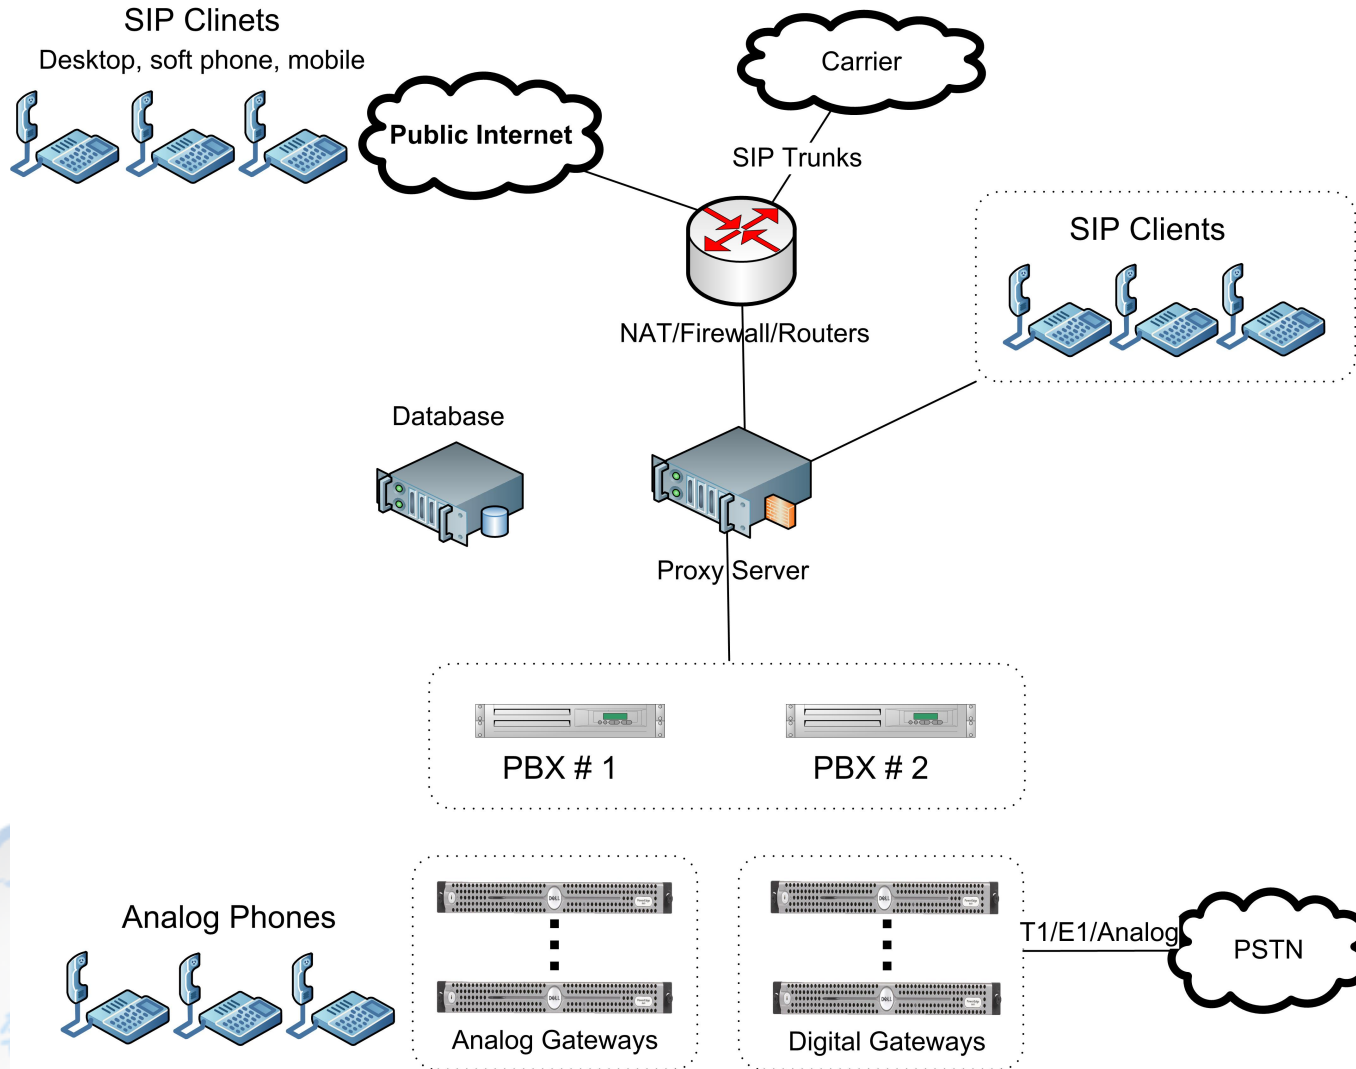

Cloud (Cont'd)

- Redundant
 - Device and Service Level Redundancy
 - Disaster Recovery (Across multiple locations)
- Cheaper
 - Shared (Colo)

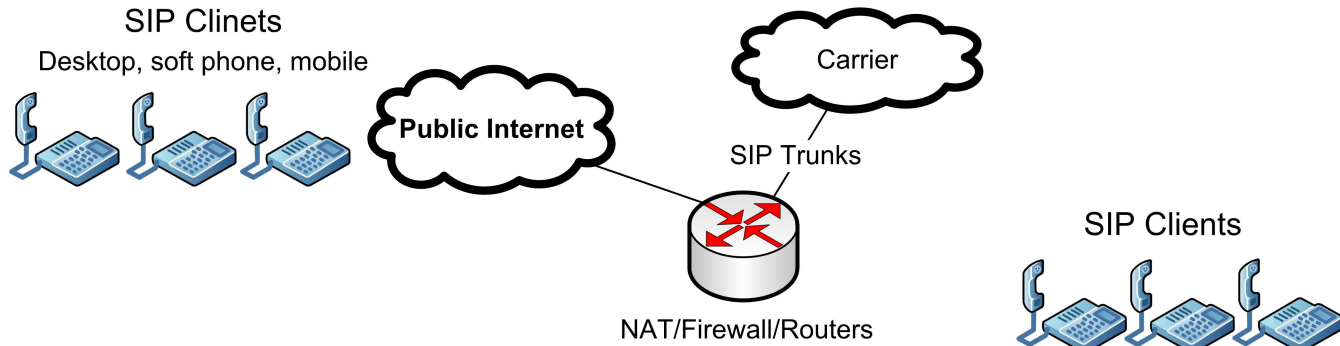

Basic Network Diagram

Redundancy

Redundant Databases

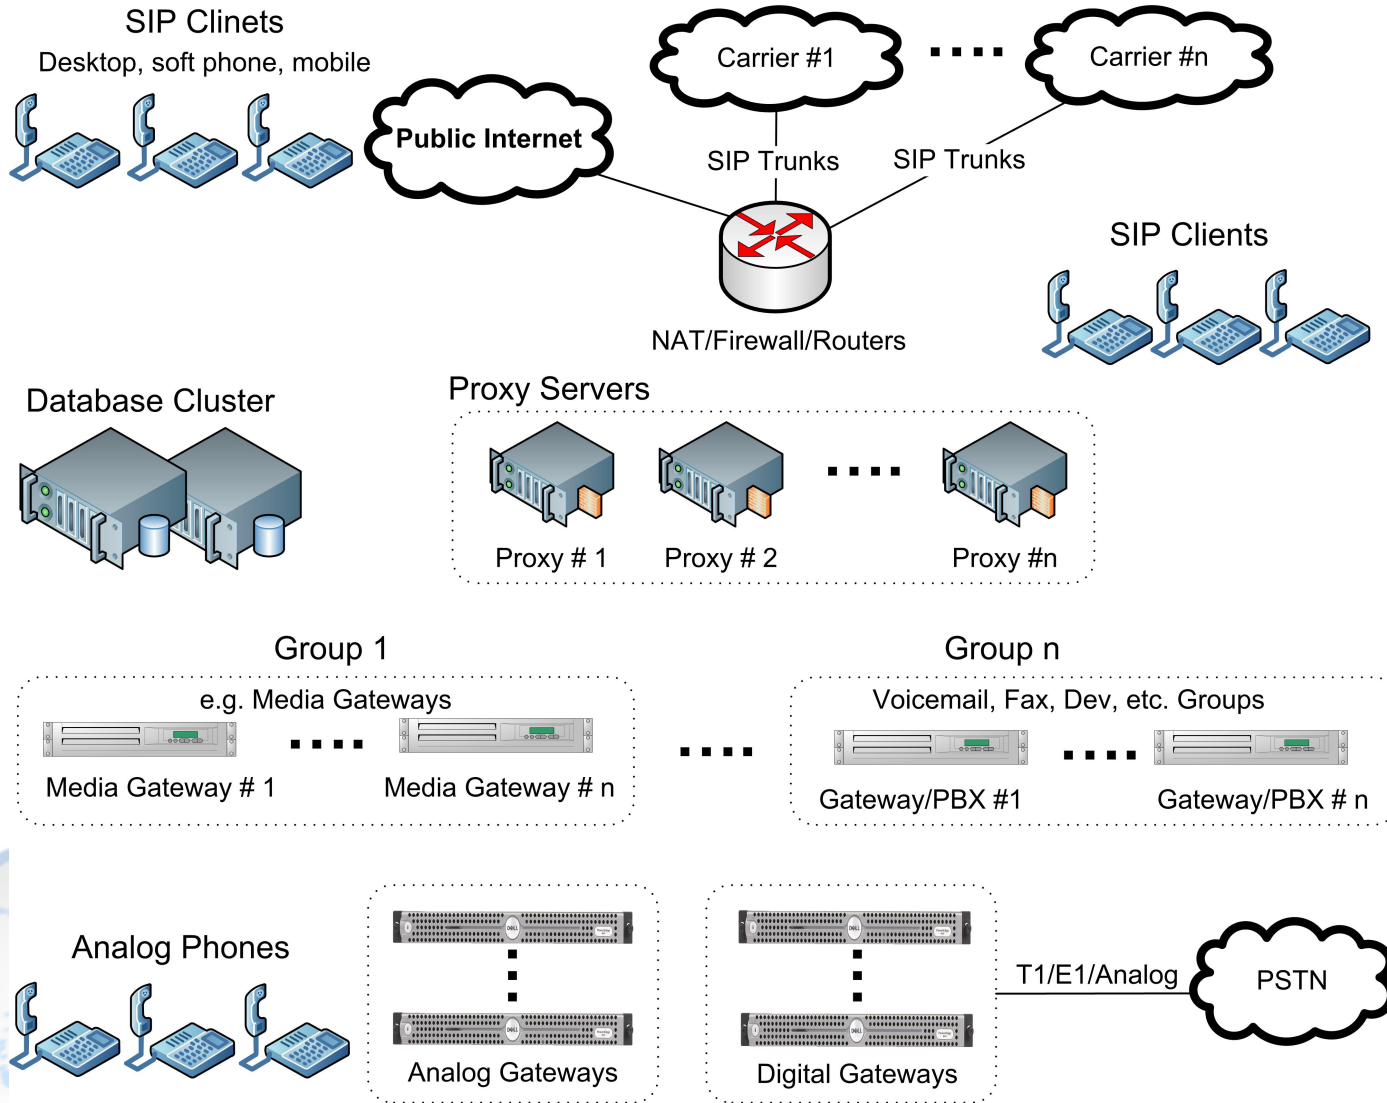

Analog Phones
